

Streptococcus pneumoniae SEROTYPE EPIDEMIOLOGY, ANTIBIOTIC SUSCEPTIBILITY PROFILES AND ASSOCIATED RISK FACTORS AMONG CHILDREN ATTENDING GERTRUDES CHILDREN'S HOSPITAL

VARIABLE	SPECIFICATIONS (<i>mm: millimeters</i>)	INTERPRETATION (<i>where necessary</i>)
Erythromycin	<ul style="list-style-type: none"> • NGO • 15-20mm • 21mm • 22-25mm • 26-30mm • ≥ 31mm 	<ul style="list-style-type: none"> • NGO: No growth observed • All <i>Streptococcus pneumoniae</i> organisms with a clearance zone (CZ) of below 21mm were considered non-susceptible to erythromycin • Organisms with a CZ of above 21mm were considered susceptible to erythromycin
Vancomycin	<ul style="list-style-type: none"> • NGO • <17mm • 17mm • 18-20mm • 21-25mm • ≥ 25mm 	<ul style="list-style-type: none"> • NGO: No growth observed • All <i>Streptococcus pneumoniae</i> organisms with a clearance zone (CZ) of below 17mm were considered non-susceptible to vancomycin • Organisms with a CZ of above 17mm were considered susceptible vancomycin
Oxacillin	<ul style="list-style-type: none"> • NGO • 15-18mm • 19mm • 20-24mm • 25-29mm • ≥ 30mm 	<ul style="list-style-type: none"> • NGO: No growth observed • All <i>Streptococcus pneumoniae</i> organisms with a clearance zone (CZ) of below 19mm were considered non-susceptible to oxacillin • Organisms with a CZ of above 19mm were considered susceptible oxacillin
Ceftriaxone	<ul style="list-style-type: none"> • NGO • 20-24mm • 25-29mm • 30mm 	<ul style="list-style-type: none"> • NGO: No growth observed • All <i>Streptococcus pneumoniae</i> organisms

***Streptococcus pneumoniae* SEROTYPE EPIDEMIOLOGY, ANTIBIOTIC SUSCEPTIBILITY PROFILES AND ASSOCIATED RISK FACTORS AMONG CHILDREN ATTENDING GERTRUDES CHILDREN'S HOSPITAL**

	<ul style="list-style-type: none"> • 31-35mm • 36-40mm 	<ul style="list-style-type: none"> • with a clearance zone (CZ) of below 30mm were considered non-susceptible to ceftriaxone
Clindamycin	<ul style="list-style-type: none"> • NGO • 15-18mm • 19mm • 20-24mm • 25-29mm • ≥ 30mm 	<ul style="list-style-type: none"> • Organisms with a CZ of above 30mm were considered susceptible ceftriaxone • NGO: No growth observed • All <i>Streptococcus pneumoniae</i> organisms with a clearance zone (CZ) of below 19mm were considered non-susceptible to clindamycin • Organisms with a CZ of above 19mm were considered susceptible to clindamycin
Mothers Age	<ul style="list-style-type: none"> • 18 to 24 years to ≥ 46 years 	<ul style="list-style-type: none"> • Mothers within the reproductive phase <ul style="list-style-type: none"> • After menopause
Mother's level of education	<ul style="list-style-type: none"> • \leqPrimary School to; • Post graduate level 	<ul style="list-style-type: none"> • Minimum possible level of educations vs.; • Highest possible level of education <ul style="list-style-type: none"> • Minimum recommended wage as per GoK; • Amount of wage/month
Family income/month	<ul style="list-style-type: none"> • 70-140USD; • ≥ 460USD 	<ul style="list-style-type: none"> • Size of the house where the subject resided
Household size	<ul style="list-style-type: none"> • Single room to; • Over 4 bedroomed house 	<ul style="list-style-type: none"> • Method of waste disposal as per subject's household
Waste Disposal Method	<ul style="list-style-type: none"> • Public Sewerage <ul style="list-style-type: none"> • Private • Other 	<ul style="list-style-type: none"> • The type of cooking fuel used at the subject's home
Type of cooking fuel	<ul style="list-style-type: none"> • Gas • Electricity • Stove 	

***Streptococcus pneumoniae* SEROTYPE EPIDEMIOLOGY, ANTIBIOTIC SUSCEPTIBILITY PROFILES AND ASSOCIATED RISK FACTORS AMONG CHILDREN ATTENDING GERTRUDES CHILDREN'S HOSPITAL**

	<ul style="list-style-type: none"> • Firewood • Charcoal • Other 	
Mother's occupation	<ul style="list-style-type: none"> • White collar job • Self-employed • Housewife 	<ul style="list-style-type: none"> • Whether subject's mother is employed or otherwise
Household source of lighting	<ul style="list-style-type: none"> • Candle, traditional lamp, candle, solar, electricity 	<ul style="list-style-type: none"> • Source of lighting for the subject's household
Child's age	<ul style="list-style-type: none"> • 6-12months to 49-60months 	<ul style="list-style-type: none"> • Age of the subject in months
Breastfeeding frequency	<ul style="list-style-type: none"> • *1,*2*3*4≥*4 • None 	<ul style="list-style-type: none"> • Number of times the subject was breastfed in a span of 24 hours
Breastfeeding type	<ul style="list-style-type: none"> • Moderate • Exclusive • None 	<ul style="list-style-type: none"> • Other than breastfeeding, whether the subject was fed on any other food during the first 6 months after birth
Birth weight	<ul style="list-style-type: none"> • ≤1 Kgs to ≥5.1Kgs 	<ul style="list-style-type: none"> • Body weight of the subject at birth in kilograms
Optochin Zones	<ul style="list-style-type: none"> • ≤13mm • 14mm • 15-17mm • 18-20mm • ≥21mm 	<ul style="list-style-type: none"> • Streptococcus pneumoniae isolates with CZ of below 14mm were considered non-susceptible to optochin

-
- Strength of the antibiotic against *Streptococcus pneumoniae* was determined on the basis of the size of the CZ. The larger the CZ the more effective was the antibiotic against the bacteria.
